## ESP Erlab Safety Program - our commitment to your safety

Our laboratory analyzes interactions between molecules and validates the right filtration technology for your applications.

Based on this scientific analysis, our laboratory will recommend the filtration configuration.

Once GreenFumeHood filtration technology has been installed, your ESP specialist will provide at no extra cost, long term monitoring and further risk analysis services for life of the hood.

After a GFH enclosure has been installed, your ESP specialist will provide at no extra cost, long term monitoring and reconfiguration services for your GFH system based on the applications carried out within the hood.

### eValiQuest

Smart risk  
assessment study

**eValiQuest** is a new chemical assessment service designed to identify the most appropriate chemical filtration configuration for your safety. This new and improved digital tool has been ergonomically redesigned from the ground-up to be easier and simpler to use while providing extended safety protocols for evaluating chemical risks associated with your chemical handlings. Upon successful completion of your chemical analysis a suitably configured filter technology will be recommended for your relevant activity. Our team of chemical experts will then finalize and certify the best solution for optimal filter life with your filtration fume hood and for your protection.

### eGuard APP

Stay Informed

Connect your devices with the **eGuard** application: Ductless fume hoods, fume hoods equipped with the GreenFumeHood3 technology or filtration cabinets or any other Erlab appliances that can be connected. With a simple glance on your smartphone, you can remotely control the proper operation of your devices and the air quality in your laboratory. This is the assurance of enhanced security.
